Lt. Gen. (Ret.) Prabowo Subianto
Minister of Defense
Ministry of Defense
Jl. Medan Merdeka Barat No. 13-14
Jakarta Pusat 10110
Indonesia

Via e-mail: ppid@kemhan.go.id

Dear Minister Prabowo:

I'm writing on behalf of People for the Ethical Treatment of Animals (PETA) and our more than 4.5 million members and supporters regarding the Cobra Gold 2021 joint military exercise, in which thousands of military personnel from countries around the world, including Indonesia, are scheduled to participate or observe at various locations throughout Thailand. **The crude killing of animals during this annual drill dishonors troops, risks public health, and endangers species vulnerable to extinction. Based on the information presented below, we urge you to compel Cobra Gold organizers to end the use of live animals in food procurement survival exercises and instead use more effective and ethical, non-animal training methods.**

The *Daily Mail* has reported that during Cobra Gold, participants kill chickens with their bare hands, skin and eat live geckos, consume live scorpions and tarantulas, and decapitate cobras and drink their blood.¹ These callous actions—as seen in damning video footage²—put troops at risk of contracting zoonotic diseases that can endanger them and the wider public. The World Health Organization (WHO) states that “an estimated 70 per cent of emerging and re-emerging pathogens”—including those that cause COVID-19, Ebola, Zika, SARS, MERS, smallpox, tuberculosis, and other well-known diseases—originated in animals.³ SARS-CoV-2, the virus that causes COVID-19, likely originated in bats and was transmitted to humans via contact with an intermediate animal host.⁴ HIV, to cite another example, has been linked to human handling and killing of primates for bushmeat.⁵

In addition to creating a dangerous disease risk, Cobra Gold’s training exercises involving animals are both cruel and impractical. While the U.S. Department of Defense (DOD) characterizes the inhumane killing and consumption of animals as food procurement training, the practice resembles a barbaric hazing ritual and doesn’t deliver any practical survival skills. Rather, as the U.S. Marine Corps has admitted, the main objective is a camaraderie-building activity and a “time honored tradition” that purportedly cements the relationship between U.S. troops and those of the other participants⁶—a goal that could easily be achieved through other means that don’t involve causing animals pain, suffering, and death.

Furthermore, Cobra Gold may be placing species at risk who have been identified by the International Union for Conservation of Nature (IUCN), the global authority on the conservation status of species and the measures needed to safeguard biodiversity.⁷ Multiple military news sources identify the cobras who are decapitated during the event as king cobras⁸—one of two species of cobras native to Thailand who are identified as in need of protection by the IUCN.⁹ Specifically, king cobras are listed as “vulnerable,”¹⁰ meaning that they face “a high risk of extinction in the wild in the immediate future.”¹¹ There is also at least one reference by a U.S. Marine in the aforementioned Cobra Gold video to the consumption of meat from the Komodo dragon,¹² another species listed as vulnerable to extinction.

¹²See *South China Morning Post*, *supra* note 2.

Many food procurement survival skills training methods don't involve the use of animals. For instance, in the book *Primitive Wilderness Skills, Applied & Advanced*, the authors—having themselves trained U.S. Army Survival, Evasion, Resistance and Escape (SERE) instructors—explain how to obtain food in nature.¹³ In addition, Gretchen Cordy, a former U.S. Air Force survival instructor who appeared on the CBS show *Survivor*, hosts an instructional wilderness survival video series titled *Prepared to Survive*.¹⁴ SERE specialists are already using virtual reality to prepare U.S. Air Force pilots for worst-case scenarios,¹⁵ and interactive video games that have food procurement components are now on the market. Furthermore, as the *Daily Mail* notes, “There are also vegan options too with the jungle being rich in fruit and other lush, edible vegetation.”¹⁶

PETA U.S. has submitted a petition for rulemaking to the DOD urging it to eliminate the cruel and unnecessary killing of animals during Cobra Gold.¹⁷ Ending the use of animals for survival training is not without precedent. In 2011, the U.S. Marine Corps Mountain Warfare Training Center suspended its use of live animals in its survival training courses following discussions with PETA U.S.¹⁸ Nearly three decades ago, the U.S. Army's Dugway Proving Ground also canceled a survival skills training course using animals after PETA U.S. asked then-U.S. Secretary of Defense Les Aspin to intervene.¹⁹

For the sake of military personnel, public health, and animals, we urge you to follow the lead of these facilities by demanding that Cobra Gold organizers permanently replace the use of live animals in food procurement survival exercises with more effective and ethical, non-animal training methods.

May we please hear from you on this urgent matter? You can contact me via e-mail at JasonB@PETAAsiaPacific.com. Thank you. We look forward to your response.
